Subject: BPPD memo for In2Care Section 18
Attachments: Bb GHA in2Care trap BPPD memo 4-29-16.docx

Hi Andrea and Tawanda,

Attached is our memo with the human health and ecological risk assessment for *Beauveria bassiana* GHA for the Section 18 registration of the In2Care product. Please note that I have recommended addition of environmental hazard statements for honey bees, which is required for current end use products containing *Beauveria bassiana* GHA. While the potential exposure to honey bees may be low, the fungus is living and can be transferred between insects by contact. When they come in for a Section 3, we will have more time to fully assess whether this may lead to significant exposures and may be able to reconsider honey bee hazard statements. If you have any questions or want to discuss it further, please let me know.

Thanks,

Shannon
